20+ years experience

Design and Develop Data Warehouse, Business Intelligence, Web and AI enabled applications

Microsoft MVP for AI

Passionate on data and ways of exposing and derive valuable information from data.

Trainer (MCT) and Speaker

Train and share knowledge on Data Platform technologies using real world examples. Speaker at various conferences and user group events.

Organiser

Organise SQLSaturday and user group events.

SQL Saturday Wellington

Pre-Conference – 21st Feb 2020

**Data Science using Data Bricks – Ginger Grant
(MVP from United States)**

Cost - \$300 NZD

9:00 a.m. – 4:00 p.m.

Porirua, 5022

SQL Saturday Wellington

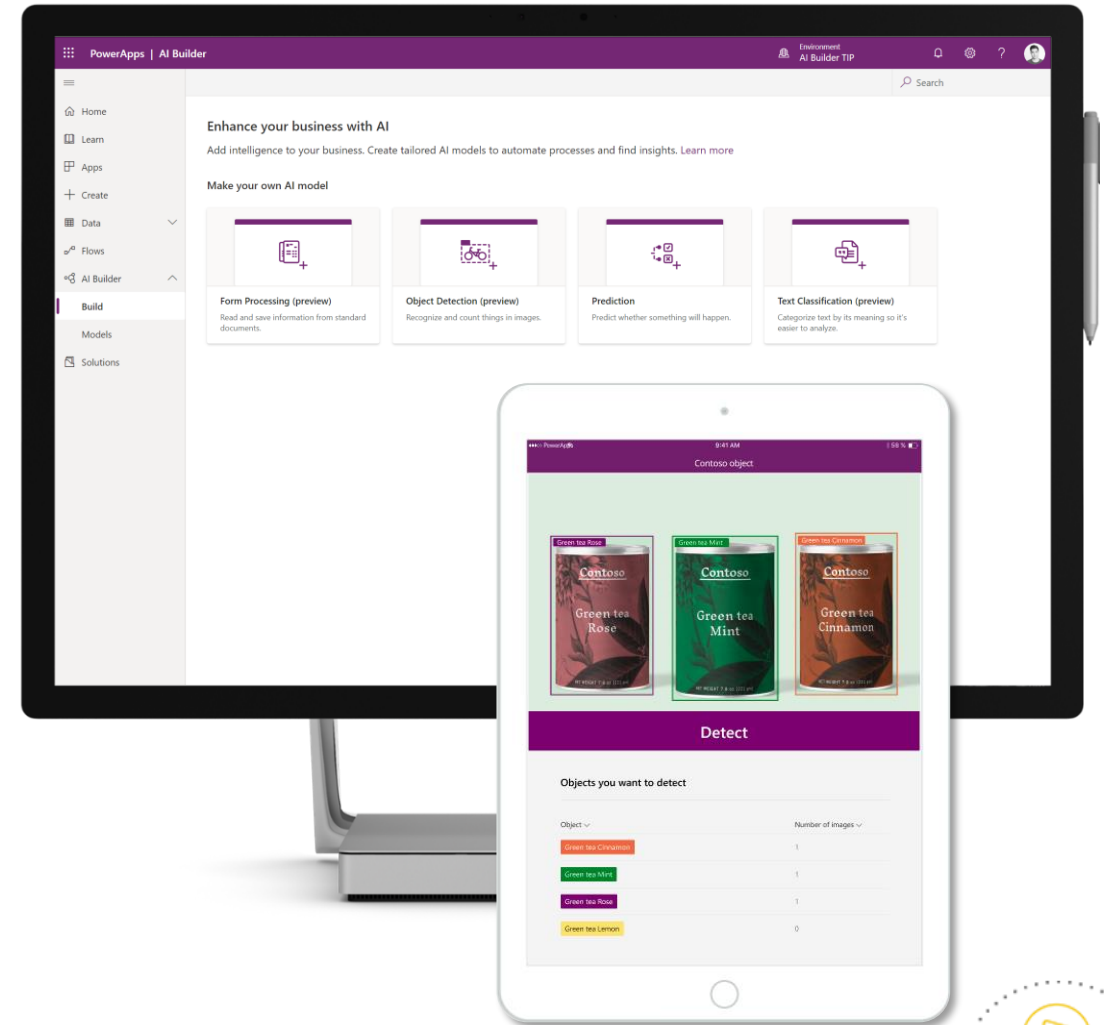

FREE training event for Developers or any professional who use the Microsoft data platform.

- Data Platform Strategy, Architecture, Development, Maintenance and Performance Tuning
- SQL Server (on-premises & Azure)
- Data Science, Artificial Intelligence, Bots, Machine Learning and Internet of Things
- Business Intelligence, Analytics & Visualisation
- DevOps, PowerShell and Containers
- Infrastructure, Security & Deployment
- Women in Technology
- Professional Development
- Soft Skills

Agenda

- Introducing AI Builder
- Prebuild models
- Custom models
- Add Intelligence to Apps
- Demo

Power Platform

Power BI
Business
analytics

Power Apps
Application

Prebuilt models and Availability

Business card reader (Power Automate and PowerApps)

Pull contact information from business cards, store this information in your database, and import it into your CRM system.

Sentiment analysis (preview) (Power Automate)

Detect positive, negative, neutral and mixed sentiment in social media, customer reviews or any text data you want to analyze.

Key phrase extraction (preview) (Power Automate)

Extract the main points and key phrases in text documents.

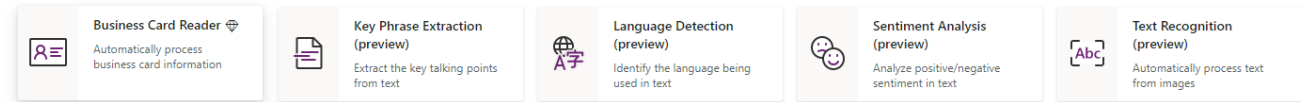

Language detection (preview) (Power Automate)

Use this model to identify the predominant language of a text document.

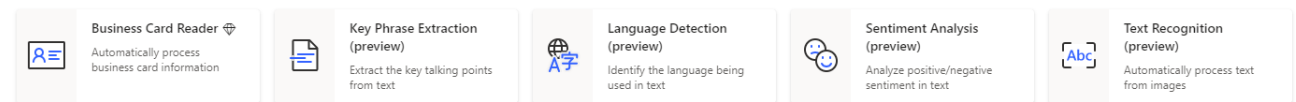

Text recognition (preview) (Power Automate and PowerApps)

Extract embedded printed and handwritten text from documents and images into machine-readable character streams.

Get straight to productivity

Get straight to productivity

Custom models and Availability

Prediction

Use your database and this AI model to determine the likelihood of specific business outcomes.

Form Processing (preview)

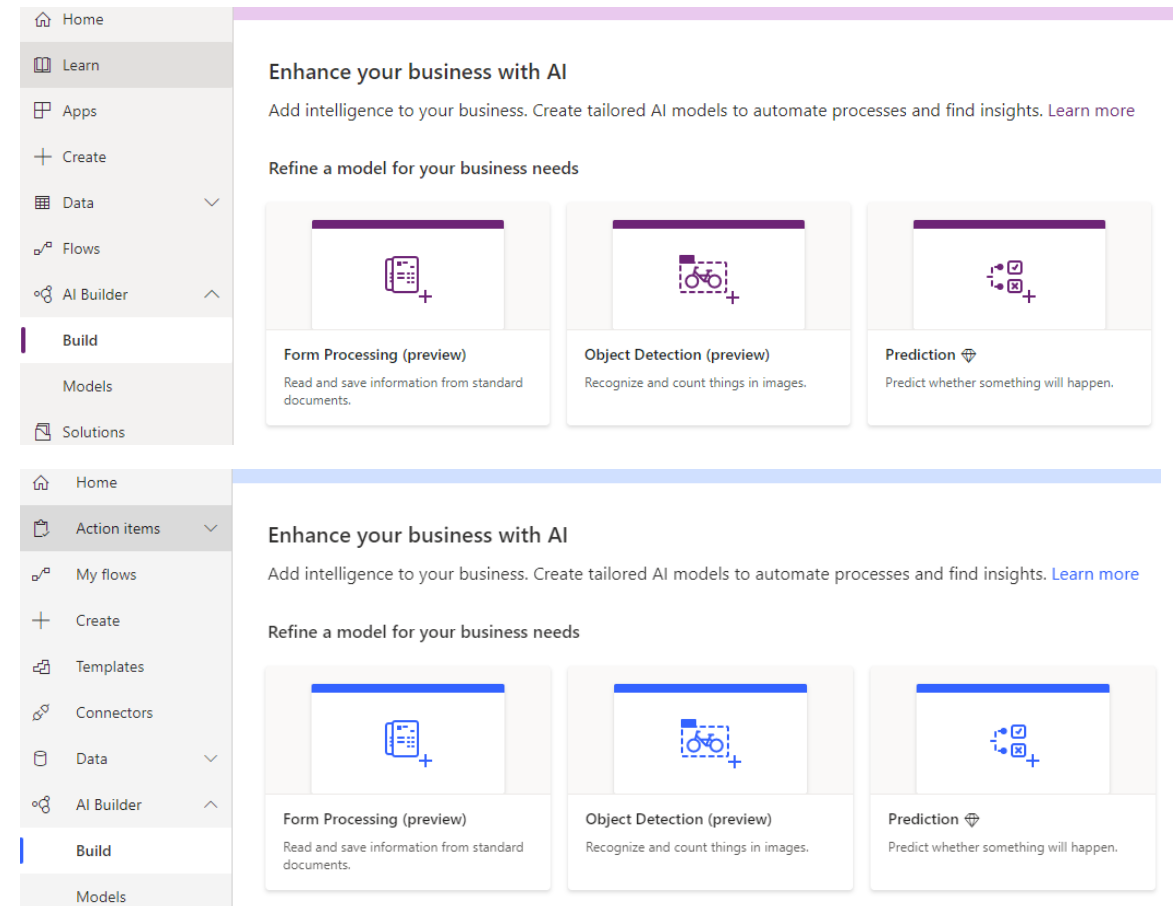

Read, extract, and process data from scans, emails, PDFs, and images.

Object Detection (preview)

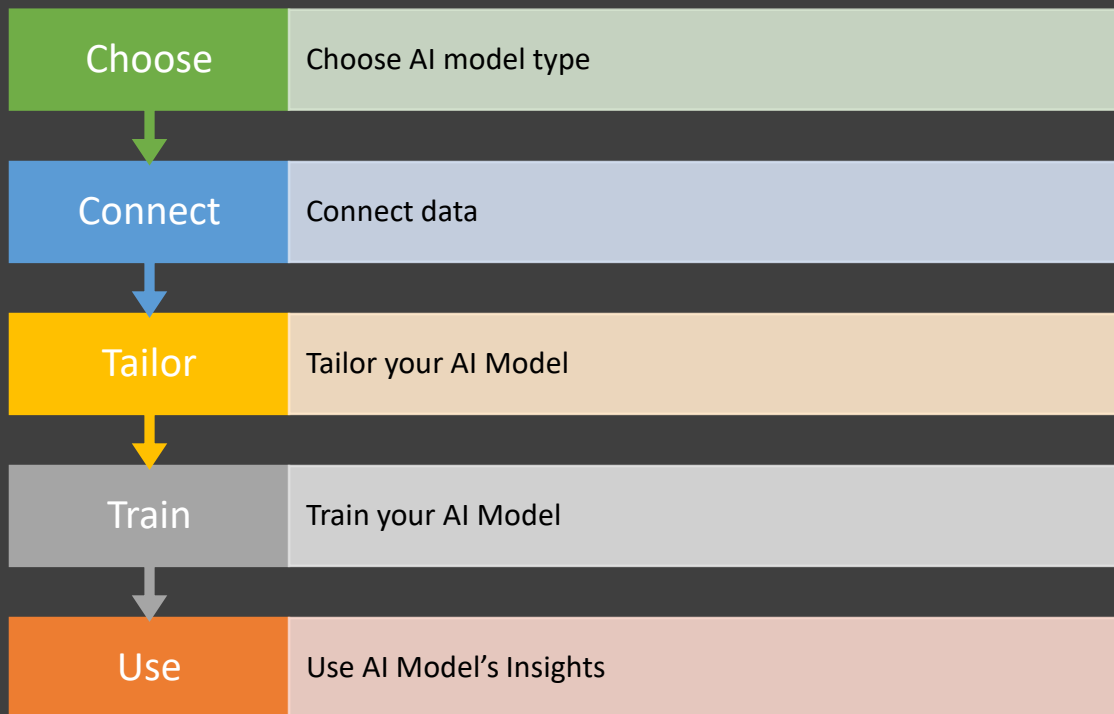

Build an AI model that recognizes and counts visual objects.

Text Classification (preview)

Build an application that reviews, tags, and classifies large volumes of text to track sentiment, improve customer experiences, and mine valuable insights.

Add Intelligence to Apps

Scenario: Invoice processing with Approvals

This is a common payment scenario for many organizations. An invoice with a balance due is received in email. If the amount is above a certain value, it must go through the next level of approval.

This would have previously been a manual process. Instead with AI Builder Forms processing and Power Automate Approvals, it can be completely automated within minutes. The approval can be performed with adaptive cards in Teams. Then, using UI flows, the invoice can be added to a legacy invoice processing app that does not expose any APIs

Form Processing AI Model Requirements

JPG, PNG, or PDF format

Must not exceed 4 MB and should not be more than 50 pages for PDF documents

For images, dimensions must be between 530 x 100 and 4200 x 4200 pixels.

If scanned from paper documents, scans should be high-quality images

Must contain keys and values

Keys can appear above or to the left of the values, but not below or to the right

Optimization Tips

Complex tables (nested tables, merged headers or cells, and so on)

Check boxes or radio buttons

PDF documents longer than 50 pages

Fillable PDFs
